001 · EXPERIENCE

Frontend Engineer | AmazingTalker · VCAAS

Aug 2025 – Mar 2026

React TypeScript MobX BytePlus RTC Electron NX Monorepo 65+ merged PRs

- Broke down PM requirements into **ordered prerequisites**—e.g. screen-share-control: refactored participant panel & ChatProvider for clean state boundaries, then shipped **ScreenShareRequestProvider** 's permission-state model.
- Maintained reactive meeting state with **MobX (observer / reaction)** across SDK stores (RTC / attend / device), ensuring consistent mute, camera & permission behaviors through role transitions.
- Built Electron screenshot (auto-save, save-as, Document PiP) and wired WebSocket-driven SDK events through custom providers & hooks—shipped stream reactions & mic-activity animation end-to-end.

Full Stack Developer · Intern | WeHelp Bootcamp

Jan 2025 – Jul 2025

- Completed 6-month full-stack program—built **3 production-grade apps** (Splitly + 2 others) covering React, Next.js, FastAPI, PostgreSQL, JWT auth & third-party payment integration.

UI/UX Designer & Designer Mentor | AmazingTalker

Sep 2022 – Dec 2024

- Optimized shopping cart flow end-to-end with engineering — defined drop-off hypotheses, drove solution validation, **+14% purchase conversion**; established company-wide **Design Guidelines** and component library
- Led design mentoring for junior designers; contributed to design-engineering workflow standards across the product team

002 · SKILLS

Frontend	React 18, TypeScript, Next.js, MobX
Styling	CSS Modules, LESS, Tailwind, Ant Design
RTC / Desktop	WebRTC, BytePlus RTC, Electron, NX Monorepo
AI / Tooling	Prompt Engineering, AI-assisted development
Design	Responsive Design, Design Systems, UX Research

003 · EDUCATION & CREDENTIALS

B.D. Industrial Design

2015 - 2019

National Taiwan University of Science and Technology

Graduation Exhibition: **MIMU No.Tent.** — technical collaboration with BenQ; served as the conceptual **precursor to the BenQ GV50**.

Google Project Management

Coursera

Professional Certificate
project scoping, agile delivery & stakeholder management

004 · SELECTED PROJECTS

Splitly

website github presentation

Split bills & track expenses with multiple splitting methods.

- One unified data model drives personal splits, group splits, and repayments — three real-time calculators (actual, percentage, adjusted) with client-side caching

React Next.js Tailwind FastAPI Postgres AWS EC2 Firebase Vercel

Track Stock WIP

github

AI-assisted US-equities monitor— live quotes, news digests & smart alerts.

- Isolated fault domains + caching across 5 data providers; parallel Claude API calls for multi-ticker news synthesis
- Expanding with weighted scoring (technical 35% + fundamental 45% + sentiment 20%) and RAG-based knowledge retrieval for investment research

Next.js 14 FastAPI Claude API yfinance Finnhub Alpha Vantage NewsAPI Telegram

Daily Assistant

github

AI-driven daily planning on Telegram × iCloud calendar, automated.

- Two-agent role separation (Secretary + Career Coach) via Claude API; bidirectional iCloud sync over CalDAV; cron-driven daily briefings and weekly reviews, fully automated

Node.js Claude API Telegram CalDAV
