

Designer-turned-engineer with 5+ years spanning industrial design, UX, and frontend engineering. At AmazingTalker, I moved from establishing the company's Design Guidelines and component library as a UI/UX Designer to shipping 65+ PRs as a Frontend Engineer — the same product, different vantage point. I build at the intersection where design decisions and engineering constraints meet, and I use AI tooling (Claude API, prompt engineering) to move faster without sacrificing quality.

001 • EXPERIENCE

Frontend Engineer | [AmazingTalker](#) • VCAAS Aug 2025 – Mar 2026

Returned to AmazingTalker as an engineer after 2+ years as its UI/UX Designer — an intentional role transition to close the design ↔ engineering gap firsthand.

- React TypeScript MobX BytePlus RTC Electron NX Monorepo 65+ merged PRs
- Broke down PM requirements into **ordered prerequisites**—e.g. screen-share-control: refactored participant panel & ChatProvider for clean state boundaries, then shipped **ScreenShareRequestProvider**'s permission-state model.
 - Maintained reactive meeting state with **MobX (observer / reaction)** across SDK stores (RTC / attend / device), ensuring consistent mute, camera & permission behaviors through role transitions.
 - Built Electron screenshot (auto-save, save-as, Document PiP) and wired **WebSocket-driven SDK** events through custom providers & hooks—shipped stream reactions & mic-activity animation end-to-end.

Full Stack Developer • Intern | [WeHelp Bootcamp](#) Jan 2025 – Jul 2025

- Completed 6-month full-stack program—built **3 production-grade apps** (Splitly + 2 others) covering React, Next.js, FastAPI, PostgreSQL, JWT auth & third-party payment integration.

UI/UX Designer & Designer Mentor | [AmazingTalker](#) Sep 2022 – Dec 2024

- Collaborated directly with engineering to redesign the checkout flow — defined drop-off hypotheses, drove A/B validation, **shipped +14% purchase conversion**. The **Design Guidelines** and component library I built from scratch later became the foundation I built on top of as an engineer.
- Established company-wide Design Guidelines and component library; led design mentoring for junior designers; contributed to design–engineering workflow standards across the product team.

002 • SKILLS

Frontend	React 18, TypeScript, Next.js, MobX
Styling	CSS Modules, LESS, Tailwind, Ant Design
RTC / Desktop	WebRTC, BytePlus RTC, Electron, NX Monorepo
AI / Tooling	Prompt Engineering, AI-assisted development
Design	Figma, Design Systems, UX Research

003 • EDUCATION & CREDENTIALS

B.D. Industrial Design 2015 - 2019

National Taiwan University of Science and Technology

Graduation Exhibition: **MIMU No.Tent.** — technical collaboration with BenQ; served as the conceptual **precursor to the BenQ GV50**.

Google Project Management Coursera

Professional Certificate
project scoping, agile delivery & stakeholder management

004 • SELECTED PROJECTS

[website](#) [github](#) [presentation](#)

Split bills & track expenses with multiple splitting methods.

- One unified data model drives personal splits, group splits, and repayments — three real-time calculators (actual, percentage, adjusted) with client-side caching

React Next.js Tailwind FastAPI Postgres AWS EC2 Firebase Vercel

Daily Assistant

[github](#)

AI-driven daily planning on Telegram × iCloud calendar, automated.

- Two-agent role separation (Secretary + Career Coach) via Claude API; bidirectional iCloud sync over CalDAV; cron-driven daily briefings and weekly reviews, fully automated
